

Chris Skilton: Good morning and thank you for joining us. With me I have David Foster, GE Banking and Clayton Herbert, Acting CFO.

As you are aware, we are required as part of our Basel II Pillar 3 reporting to update the market on credit quality and capital issues on a quarterly basis. Given the interest around this, we have provided some additional information, over and above the required tables that are attached. I'll talk to these slides and will provide an opportunity to ask questions at the end of the presentation.

I'll also provide a brief update on the progress of our legal entity restructure.

I would make the point that David Foster recently presented at an investor conference and provided a detailed strategic update around the bank and our de-risking strategies. I won't be going over those issues again, however we are happy to take questions on that subject.

One of the slides that David did provide in his presentation was the March 31 breakdown of our asset mix. This is included again on slide 2.

In total, Suncorp has \$55 billion of total loans, with \$38.2 billion in core lending and \$16.8 billion in non-core run-off.

One of the points that David made, and it is important to restate, is that there will continue to be draw-downs against our non-core development finance portfolio and in fact the portfolio marginally increased in the last quarter to March 31.

While it is obviously difficult to accurately predict the level of repayments, drawdowns and refinancing activity in aggregate, we do believe the size of the non-core portfolio in general and the development finance book, in particular, are at their peak and will now begin to amortise and the balance reduce.

Provisions and write-offs

	Mar 09 Qtr
Collective provision	\$34.0m
Specific provision	\$85.9m
Actual write-offs	\$16.4m
Impairment loss	\$136.3m

March 09 Quarter Summary

- Total bad debt charge of \$136.3 million represents around 100 basis points (annualised) of total lending
- Year to date bad debt charge of \$491 million represents around 115 basis points (annualised excluding economic overlay) of total lending
- No significant surprises
- We expect further deterioration in property values and anticipate our full year impairment charge will be between 125 to 145 basis points.

3

Moving to slide 3 and our impairment loss, the total charge of \$136 million for the quarter brings our actual year to date impairment charge to \$491 million, which includes the \$75 million economic overlay we took in the first half.

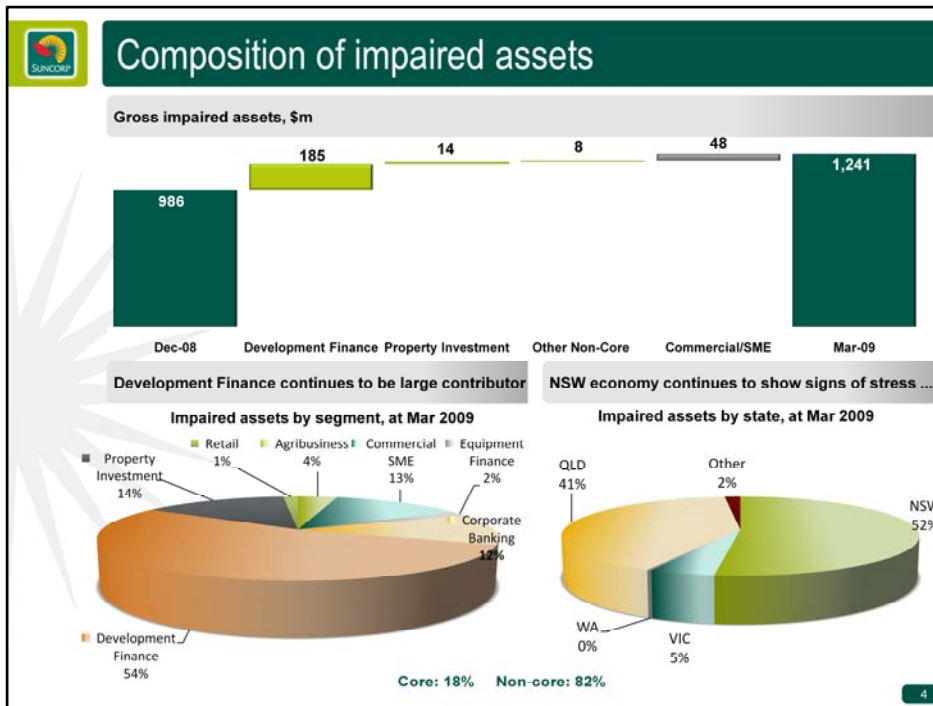

This represents 115 basis points of total lending on an annualised basis, assuming you don't annualise the economic overlay.

So, pleasingly, what we have seen through Q3 and into Q4 has largely been in line with our expectation following the detailed review of our loan book -- with provisioning levels being largely driven by reduced valuations on existing impaired assets, as opposed to new impaired accounts.

But I must make the important point that, in accordance with our normal practice, we will be obtaining a number of revised valuations during June, and this, along with the continued economic deterioration, leads us to the view that our full year bad debt charge is likely to be at top end of our current 100 – 130 basis points guidance.

However, given the uncertain economic outlook it would be foolish of me not to acknowledge there has to be some downside risk to this outlook. We therefore feel it is appropriate to adjust our full year bad debt guidance to 125 – 145 basis points in order to reflect that risk.

Even though we are just five weeks from the end of this reporting period, I must stress that the usual guidance caveats must apply. That is - there can be no guarantee that we won't be impacted by an unexpected large exposure or that a combination of other factors, either domestic or global, will be beyond reasonable predictions.

To impaired assets now on slide 4.

I've updated the waterfall chart of impaired assets to show the contribution from each of the core and non-core portfolios.

I would make the point again that we haven't experienced the large single name impairments that impacted us in the first two quarters of the year.

We have seen an increase in smaller accounts and this has primarily contributed to the \$255 million increase.

Of the impaired asset balance, 82% are in our non-core book with the majority continuing to be in NSW.

Specific provisions

- Specific provisions have increased to \$301 million with the increase primarily in Development Finance.

- Specific provisions at 31 March 2009 are predominantly non-core (83%).

Specific provisions have increased to \$301 million and I think it's worth pointing out that over 80% of the specific provision relates to the non-core book, primarily in the Development Finance and Corporate segments.

To the Collective Provisions now and this has increased to \$286 million which includes the \$75 million economic overlay booked in the first half.

Now to funding and the significant de-risking activity we have undertaken in lengthening our balance sheet, which of course is aligned to our decision to identify non-core lending and place it into run-off.

As you'll know, we have increased our liquid assets ratio from 12.5% to 18.3% through to the end of April. We have completed approximately six and a half billion of term funding since January and have lengthened the weighted average term of liabilities from 0.69 years to 1.33 years during this financial year. We have significantly reduced our reliance on short-term wholesale funding with the balance, net of liquid assets, now at 11% of lending, which is down from 27% at the start of the year.

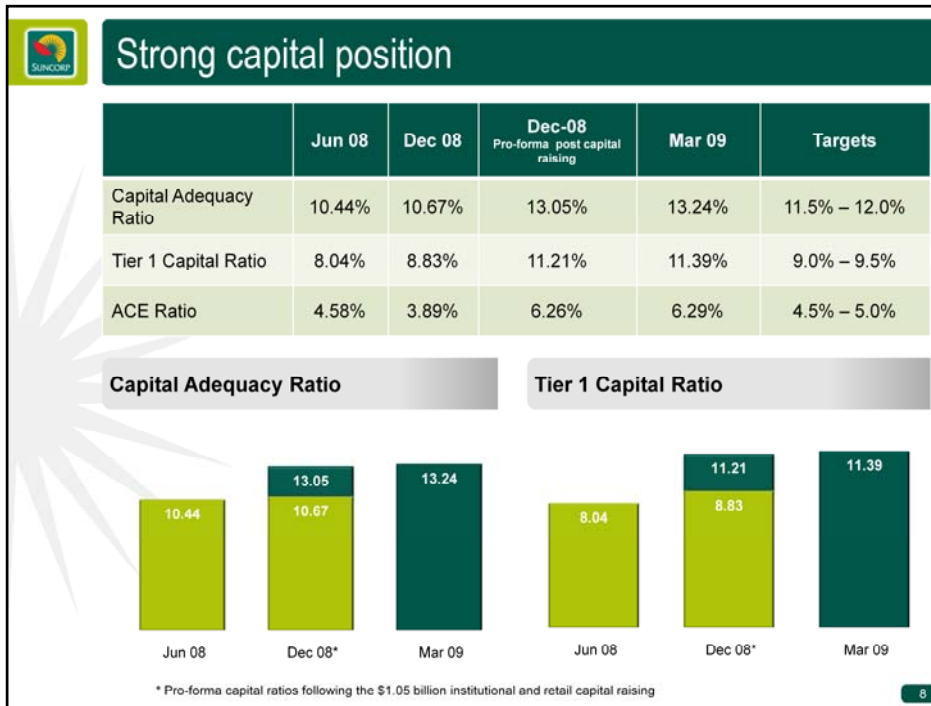

There is no doubt that funding markets are continuing to thaw as debt markets sentiment improves and confidence in the global financial system is slowly restored. But investors obviously remain extremely cautious and wary of future shocks.

The Government guarantee has provided good access to global liquidity and this mechanism is being widely used by all Australian banks. Unfortunately, for the regional banks, debt investors are differentiating between AAA rated Government guaranteed paper issued by major banks and AAA rated Government guaranteed paper issued by regionals such as ourselves. When coupled with the differentiated fee scale applied by the Government, this puts sub AA rated issuers at a distinct disadvantage.

This funding disadvantage will be further compounded as AA rated Banks raise non-guaranteed funding at lower all up cost than guaranteed issuance, as they have done from domestic sources and, more recently, from offshore markets.

This, and our de-risking strategy, will obviously have an impact on margins in the second half of 2009 and I want to reinforce our guidance of an increase in banking profit before tax and bad debts in the 'high teens'. I would like to emphasise again that the base for calculating that guidance does not include the non-recurring gains on the sale of the credit card portfolio and the VISA shares that were booked in 2007/08 (ie the base is \$668 million)

It has been suggested that the recent capital raising will improve margins in the second half, however, the benefit of the \$1 billion raising will be more than offset by the additional costs we are paying for long-term wholesale funds and the interest not brought to account on non-performing loans.

Finally, on the Bank, in the APS 330 disclosures we have updated our capital numbers for the March quarter.

As you'll be aware, the Board has recently increased our internal targets for capital adequacy from between 10 to 10.5% to between 11.5 to 12%. Following February's \$1 billion capital raising, our capital ratios have been well above the revised internal targets and our banking industry peers.

At 31 March 2009, our CAR is at 13.24% and our Tier 1 capital ratio is at 11.39% (well above other banks who are around 8 to 9%)

The ACE has also significantly increased to 6.29%, well above our long term target range of 4.5% to 5.0%.

Additionally, we will also benefit from the decision to run-off 'non-core' portfolios in the Bank. The assets involved in the run-off have a risk weighting of 100%, so when complete, the \$16.8 billion in non-core portfolios will further contribute to this strong capital story.

Legal entity restructure

**Legal Entity
Restructure I**

- Completed December 2008
- Combined the General Insurance lines of business
- Improved compliance with regulatory reporting requirements and enhanced the capital management plan.
- Resulted in access to previously trapped capital within Vero Insurance Limited

**Legal Entity
Restructure II**

- On track to be completed July 2009
- Benefits include:
 - Alignment of General Insurance and Wealth Management subsidiaries
 - Alignment of Australian and New Zealand subsidiaries
 - Greater transparency of business line performance;
 - Streamlining of accounting, management reporting and financial services.
- Additionally, the Board has approved further investigation into the legal, logistical and operational impacts of establishing a Non-Operating Holding company. Preliminary advice suggests the credit rating of the Bank would not be impacted.

9

At this time I thought it might be useful to provide an update on the progress our legal entity restructure.

At the time of the merger between Suncorp and Promina, approximately 150 entities were brought together. The Legal Entity Restructure (LER) program commenced in 2008 to facilitate the simplification of the agreed optimal corporate structure. The guiding principles have been to restructure corporate entities to align according to the governing business unit management structure and reporting lines. Benefits are:

- Transparency of accounting and reporting
- Improved administrative efficiency
- Compliance with APRA and other regulatory requirements
- Capital management flexibility; and
- Rationalisation of licensing across the group

The first stage of a group legal entity restructure was completed in December 2008. It brought together the General Insurance lines of business and allowed capital that had previously been trapped within Vero Insurance Limited to be available to the Group.

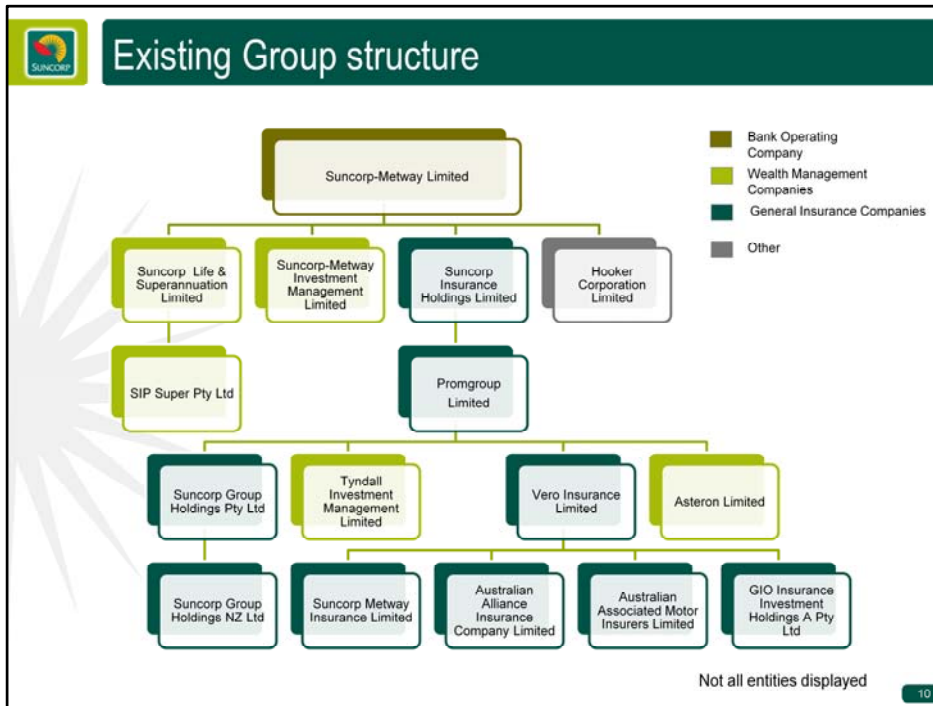

We're now into the second stage of the LER which involves aligning all general insurance and wealth management subsidiaries and this is on track to be completed by July 2009.

In addition, related activities to streamline accounting, management reporting and other financial systems across the Group are underway. This will further enhance management oversight of the businesses and statutory reporting.

As part of the final stage of the LER process, the Board has approved further investigation into the legal, logistical and operational impact of establishing a Non-Operating Holding Company (NOHC) as the listed entity owning the Banking, General Insurance and Wealth Management subsidiaries. While the Board believes a NOHC structure has the potential to deliver greater transparency of the operating businesses and allocation of capital I would point out that there are a number of structural issues that need to be considered before any decision to put a NOHC restructure proposal through a shareholder process can be made.

Ensuring the maintenance of the current credit ratings positions for each of the key operating entities in the Group in any NOHC structure is a critical factor in this investigation. Preliminary advice from Standard and Poor's indicates that the notional group operating rating would remain at 'A+/stable' and that the rating for both the Suncorp NOHC and Suncorp Metway Limited, the banking subsidiary, would be 'A/stable'.

A further update on the feasibility of this process is expected to be provided during the first quarter of the next financial year.

Looking briefly at the existing legal structure of the Group.

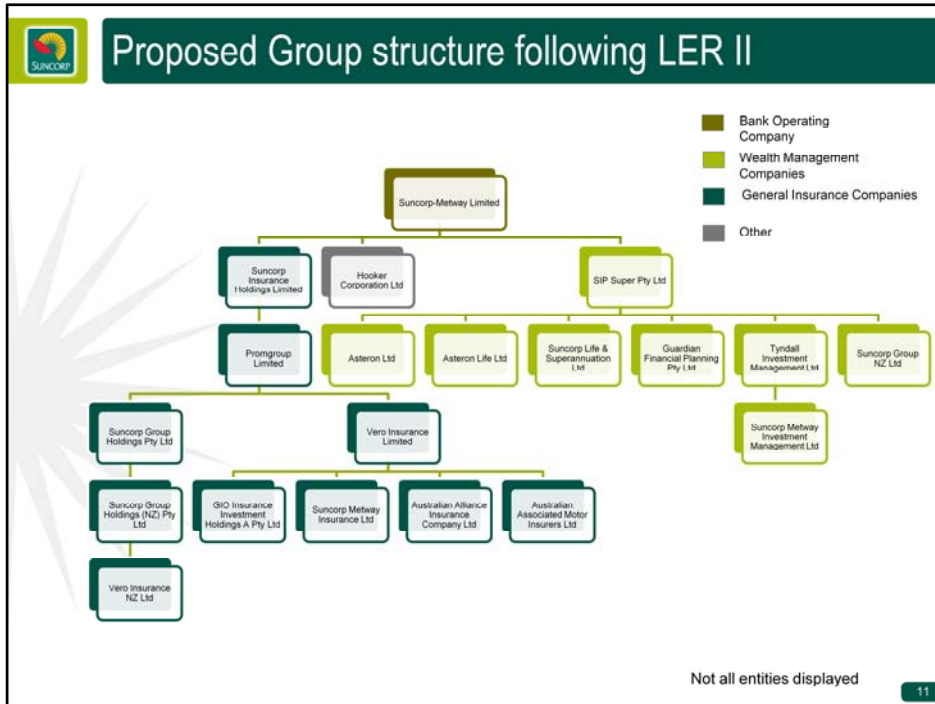

Suncorp Metway (the Bank) is the holding company for the Group.

The Australian General Insurance operations are conducted through Vero Insurance Ltd, and Suncorp Metway Insurance Ltd (SMIL), which includes the GIO business and a number of joint ventures.

Following the merger, Promina Group Ltd and it's related companies, sit under Suncorp Insurance Holdings Limited.

Vero Insurance Limited is one of those related companies and incorporates the various operating subsidiaries and joint ventures which operate the major brands AAMI and APIA.

The Group's Wealth Management business, which includes life insurance, superannuation and funds management is conducted by Suncorp Life and Superannuation, Tyndall Investments and Asteron.

Not all entities displayed

This slide shows the proposed Group following the second stage of the Legal Entity Restructure.

The result will be a more logical structure, with the General Insurance subsidiaries aligned and the Wealth Management subsidiaries aligned.

This work is on track to be completed on 1 July 2009.

So at that point, let me hand over to questions...
